Dairy-Herd-Improvement-Association Letter

ARS-52-15
(Vol. 31, No. 6)

June 1955

ADDITIONAL DHIA TESTING RULES

The American Dairy Science Association approved the following additional rules governing DHIA testing:

Relation of Supervisors and Owners:

As an employee of the local Dairy Herd Improvement Association, the supervisor's duty is to see that the tests are honestly made, accurately recorded, and completely reported. No payment, or gift, to the supervisor is permitted from the member, or others with a financial interest in the herd. The supervisor shall not test his own herd or the herd of the immediate members of his family. The supervisor is not at liberty to decide which rules are essential and which are not, but is required to observe them in all details. Owners or persons in their employ are held equally responsible with the supervisor for the enforcement of these rules.

Cows Nursing Calves - To be added to the present rule:

The recorded days in milk shall be the number of days the cow nursed calves during the testing year.

Fraudulent Practices:

Any practice that is intended to create or does create an abnormal percentage of butterfat or an abnormal yield of milk is a violation of DHIA rules.

DHIA PROVED-SIRE RECORDS TABULATED IN MAY 1955

Following is a list of 525 sires whose records were tabulated or retabulated by the Dairy Husbandry Research Branch in May 1955. Production records used in proving DHIA sires consist of 305-day lactation records standardized to a mature equivalent twice-a-day milking basis.

An asterisk at the end of a sire's registration number indicates a retabulated record. The asterisk may be followed by any number from 1 through 15 (i. e., *12) to indicate in which of the 15 printed lists his previous record appeared. Or the asterisk may be followed by the month and year (i. e., *May 51) of the DHIA letter in which his previous record appeared. Two asterisks following the sire's registration number, or following reference to a previous listing, indicate that the proved-sire tabulation or retabulation was requested by one of the States.

In case records from more than one herd were used, the reference is to the herd from which production records for the largest number of the sire's youngest daughters were reported. If the sire has been used in an artificial-breeding association, the name of the association is given.

Proved-sire records consisting of fewer than 10 comparisons are indicated as "preliminary" because these records may be significantly changed when additional comparisons become available and are included in the proved-sire records.

To make the most intelligent selection of a sire, the dairyman should use these proved-sire records to single out the most promising sire and then make every effort to supplement these data with additional information gathered from the herds in which the dams and daughters made their records. Particular attention should be given to the feeding practices and environmental conditions under which the records were made, in order to be assured that the records of the daughters were not made under more favorable conditions than those of the dams or vice versa. It is especially important to determine that there has been no selection of daughters in making the comparison.
